

# CUDA Cheat Sheet

Cuda Basics	<code>cE_t <b>cudaMalloc</b> ( void** devPtr, size_t size )</code>	Allocates memory space on device
	<code>cE_t <b>cudaFree</b> ( void* devPtr )</code>	Frees memory on device
	<code>cE_t <b>cudaMemcpy</b> ( void* dst, const void* src, size_t count, cudaMemcpyKind kind )</code>	Copies data between host and device, like memcpy. kind = cudaMemcpy{HostToDevice DeviceToHost DeviceToDevice}
	<code>__host__, __global__ void , __device__</code>	Function annotation for host, kernel and device function
	<code>cE_t <b>cudaDeviceSynchronize</b> ( void )</code>	Blocks Host until current device has finished
	<code>Kernel&lt;&lt;&lt;gridSize, blockSize&gt;&gt;&gt;(dev_ptrs)</code>	Call to kernel from host
	<code>threadIdx.{x y z}, blockIdx.{x y z}, blockDim.{x y z}, gridDim.{x y z}</code>	Available structures inside kernel
Pinned Memory	<code>int idx = index_x + index_y * gridDim.x * blockDim.x</code>	2D indexing inside kernel
	<code>cE_t <b>cudaMallocHost</b> ( void** ptr, size_t size )</code>	Allocates page-locked (pinned) memory on the host
	<code>cE_t <b>cudaFreeHost</b> ( void* ptr )</code>	Frees page-locked memory.
	<code>cE_t <b>cudaHostRegister</b> ( void* ptr, size_t size, unsigned int flags )</code>	Registers an existing host memory range for use by CUDA
	<code>cE_t <b>cudaHostUnregister</b> ( void* ptr )</code>	
	<code>cE_t <b>cudaHostAlloc</b> ( void** pHost, size_t size, unsigned int flags )</code>	Allocates page-locked memory on the host with flags (for mapped memory)
Streams	<code>cE_t <b>cudaHostGetDevicePointer</b> ( void** pDevice, void* pHost, unsigned int flags )</code>	Passes back device pointer of mapped and pinned host memory
	<code>cE_t <b>cudaStreamCreate</b> ( cudaStream_t* pStream )</code>	Creates an asynchronous stream
	<code>cE_t <b>cudaStreamDestroy</b> ( cudaStream_t stream )</code>	Destroys and cleans up an asynchronous stream
	<code>cE_t <b>cudaMemcpyAsync</b> ( void* dst, const void* src, size_t count, cudaMemcpyKind kind, cudaStream_t stream = 0 )</code>	Copies data between host and device asynchronously. Memory must be page-locked!
	<code>Kernel&lt;&lt;&lt;gridSize, blockSize, dS, stream&gt;&gt;&gt;</code>	Launch Kernel in stream
Events	<code>cE_t <b>cudaStreamSynchronize</b> ( cudaStream_t stream )</code>	Wait for specific stream
	<code>cE_t <b>cudaEventCreate</b> ( cudaEvent_t* event )</code>	Creates an event. Use, <code>cudaEventCreateWithFlags</code> to disable timing
	<code>cE_t <b>cudaEventDestroy</b> ( cudaEvent_t event )</code>	Destroys an event object
	<code>cE_t <b>cudaEventRecord</b> ( cudaEvent_t event, cudaStream_t stream = 0 )</code>	Set event state to « not occurred »
Managed	<code>cE_t <b>cudaEventSynchronize</b> ( cudaEvent_t event )</code>	Waits until an event has occurred
	<code>cE_t <b>cudaMallocManaged</b> ( void** devPtr, size_t size, unsigned int flags = cudaMemAttachGlobal )</code>	Allocates memory that will be automatically managed by the Unified Memory system.
	<code>cE_t <b>cudaMemPrefetchAsync</b> ( const void* devPtr, size_t count, int dstDevice, cudaStream_t stream = 0 )</code>	Prefetches memory to the specified destination device. Use <code>cudaCpuDeviceId</code> to migrate from Device to Host. Use <code>cudaGetDevice(int *device)</code> to get device ID.
Graphs	<code>cE_t <b>cudaStreamBeginCapture</b> ( cudaStream_t stream</code>	Begins graph capture on a stream.
	<code>cE_t <b>cudaStreamEndCapture</b> ( cudaStream_t stream, cudaGraph_t* pGraph )</code>	Ends capture on a stream, returning the captured graph.
	<code>cE_t <b>cudaGraphInstantiate</b> ( cudaGraphExec_t* e, cudaGraph_t graph, ...)</code>	Creates an executable graph from a graph. (Not all parameters shown.) Launch with (instance, graph, NULL, NULL, 0)
	<code>cE_t <b>cudaGraphLaunch</b> ( cudaGraphExec_t graphExec, cudaStream_t stream)</code>	Launches an executable graph in a stream

This cheat sheet is meant to accompany the CUDA programming course. Cuda 10.0

`cE_t` means `cudaError_t`
